

**Biography:**

Driven by the ambition to one day lead a cancer research team and pioneer groundbreaking treatments, I am currently pursuing a Ph.D. in molecular biology at the University of Montreal, following a direct entry from my Honors B.Sc. in biochemistry.

My unique trajectory unfolded within only three years of undergraduate studies, during which I dedicated myself to academic excellence, gained hands-on experience in cancer research through five internships, and accomplished notable achievements such as co-authoring my first publication. I pursued these goals out of personal interest, a testament of my unwavering passion for research.

I am grateful for the support received, starting with the prestigious CIHR Master's Award for my first Ph.D. year and continuing with a generous funding from Ovarian Cancer Canada and the Cancer Research Society for the next 2 years. This support allows me to fully commit to my research aiming to prevent resistance to treatment in ovarian cancer, accelerating progress towards improved survival.
